      "content": "User Story: AMZ-001 — Check on the Order Summary Page Summary: As a buyer, I want the system to automatically add the Amounts for the Items I have added in the Cart. Description: The Order Summary page should list with the Shipping Address selection and the individual items with delivery date to the Shipping address chosen and its Amount. Include if any Marketplace Fee and Deliver charges if applicable for the selected items. User should have option to edit the Quantity from the Summary page and clicking on Proceed to Payment, it should navigate to Payment page. Epic: Billing Summary – Ecommerce. Acceptance Criteria: Given a customer is added few items into cart from E-Commerce portal, When the Customer selects “Add to Cart”, Then the system should verify items are added to the Cart and overall summary with amount details to be shown to the customer. Given the test requires pre-authorization, When the request is sent, Then the system should store the authorization ID and Order date in the Summary record. Given a Payment is not covered, Then the system should notify both the Customer and Amazon Finance Team, and offer alternative payment options. Priority: P1 Risk: Medium Status: In Progress"

To ensure the Order Summary page functions as expected, I'll create a comprehensive set of test cases based on the provided user story and acceptance criteria.

****Test Case 1: Verify Items Added to Cart and Summary Display****

* Preconditions: User has added items to the cart from the E-Commerce portal.

* Steps:

1. Log in to the E-Commerce portal.
2. Add items to the cart.
3. Navigate to the Order Summary page.
4. Verify that the items added to the cart are displayed on the Order Summary page.
5. Verify that the overall summary with amount details is displayed.

* Expected Result: The items added to the cart are displayed on the Order Summary page, and the overall summary with amount details is shown.

****Test Case 2: Verify Shipping Address Selection and Delivery Date****

* Preconditions: User has added items to the cart and is on the Order Summary page.

* Steps:

1. Select a shipping address from the available options.
2. Verify that the delivery date is displayed for the selected shipping address.

3. Verify that the individual items with their respective delivery dates are displayed.

* Expected Result: The shipping address is selected, and the delivery date is displayed for the selected shipping address. The individual items with their respective delivery dates are also displayed.

****Test Case 3: Verify Marketplace Fee and Delivery Charges****

* Preconditions: User has added items to the cart and is on the Order Summary page.

* Steps:

1. Verify that the Marketplace Fee is displayed (if applicable).
2. Verify that the delivery charges are displayed (if applicable).
3. Verify that the total amount includes the Marketplace Fee and delivery charges (if applicable).

* Expected Result: The Marketplace Fee and delivery charges are displayed (if applicable), and the total amount includes these charges.

****Test Case 4: Edit Quantity from Summary Page****

* Preconditions: User has added items to the cart and is on the Order Summary page.

* Steps:

1. Edit the quantity of an item from the Summary page.
2. Verify that the updated quantity is reflected in the summary.
3. Verify that the total amount is updated accordingly.

* Expected Result: The quantity of the item is updated, and the total amount is updated accordingly.

****Test Case 5: Proceed to Payment****

* Preconditions: User has added items to the cart and is on the Order Summary page.

* Steps:

1. Click on "Proceed to Payment".
2. Verify that the user is navigated to the Payment page.

* Expected Result: The user is navigated to the Payment page.

****Test Case 6: Pre-Authorization and Authorization ID Storage****

* Preconditions: User has added items to the cart and is on the Order Summary page.

* Steps:

1. Send a request for pre-authorization.
2. Verify that the authorization ID is stored in the Summary record.
3. Verify that the Order date is stored in the Summary record.

* Expected Result: The authorization ID and Order date are stored in the Summary record.

****Test Case 7: Payment Not Covered and Notification****

* Preconditions: User has added items to the cart and is on the Order Summary page.

* Steps:

1. Simulate a scenario where the payment is not covered.
2. Verify that the system notifies both the customer and the Amazon Finance Team.
3. Verify that alternative payment options are offered.

* Expected Result: The system notifies both the customer and the Amazon Finance Team, and alternative payment options are offered.

These test cases cover the main functionality of the Order Summary page, including the display of items, shipping address selection, delivery date, Marketplace Fee, delivery charges, editing quantity, proceeding to payment, pre-authorization, and payment not covered scenarios. By executing these test cases, we can ensure that the Order

Summary page functions as expected and meets the requirements outlined in the user story and acceptance criteria.
